

## Department Biosafety representatives

Each department at KI that conducts work involving infection risks (including biological agents and genetically modified microorganisms) has a biosafety representative who coordinates the biosafety work at the department. The biosafety representative serves as a contact person and link between the department and KI's biosafety coordinator and disseminates central information on rules and regulations at the departmental level.

The biosafety representative coordinate, provide advice, and review documentation related to notifications of GMM F-verksamhet (activities), notifications and applications for GMM L and R verksamheter (activities)/uses, as well as notifications or permits for biological agents (infectious agents).
